07

CONCLUSION

PROJECT PREVIEW

01

- Bookify is a web-based hotel reservation system built with ASP.NET Core
- MVC using clean design patterns for scalability and maintainability.
- It allows customers to search rooms, make secure bookings with ---
- payments, and view their booking history.
- Meanwhile, hotel staff can manage rooms and reservations through a
- powerful Admin Dashboard , delivering a seamless and professional
- booking experience.

03

PROJECT GOALS

Simplify Hotel Booking Process:

To provide users with a fast, intuitive, and secure platform to search, book, and manage hotel reservations online.

GOAL 1

Enhance User Experience

To design a user-friendly interface with clear navigation, responsive layout, and seamless interaction across all devices.

GOAL 2

Ensure System Scalability and Maintainability

To build the system using ASP.NET Core MVC and clean architecture principles, allowing for future scalability and easier maintenance.

GOAL 3

Requirements Gathering:

1-Stakeholder Analysis:

Customer (User):

- Searches for available rooms.
- Views room details(price, features).
- Books a room and pays securelyonline.
- Tracks previous bookings through a personal account.

Requirements Gathering:

1-Stakeholder Analysis:

- o **Admin (Hotel Staff):**

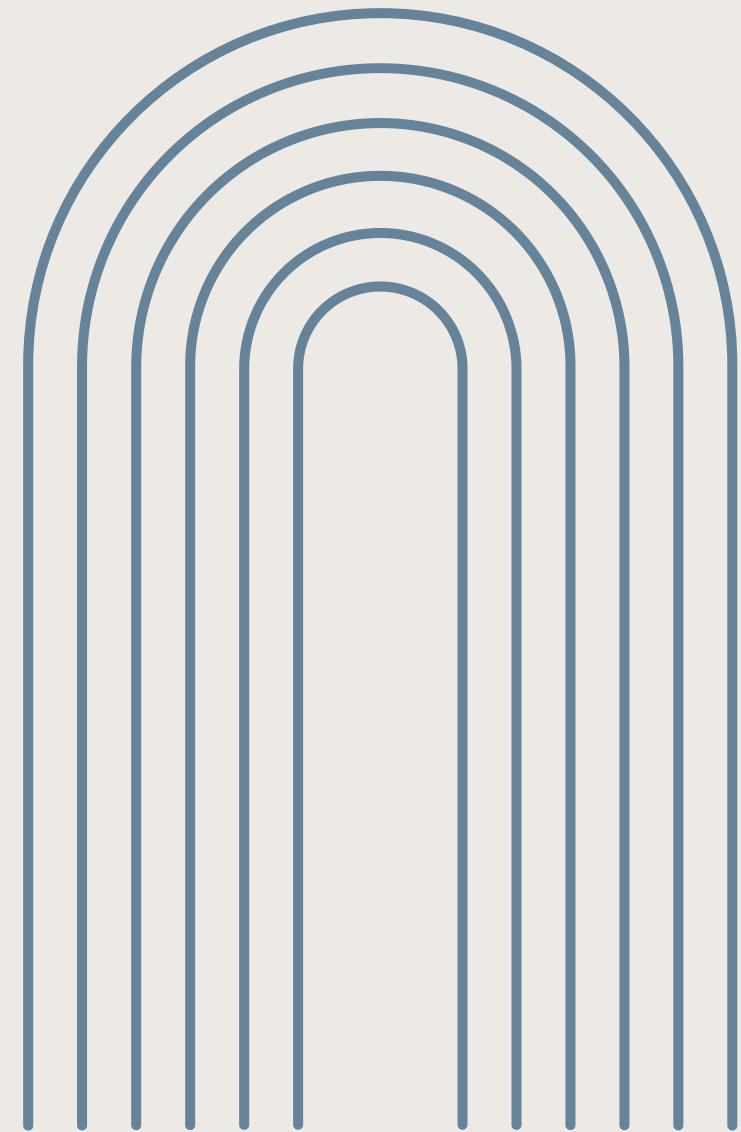

- Manages rooms and room types.
- Monitors all bookings.
- Controls user permissions.

Requirements Gathering:

1-Stakeholder Analysis:

oSystem :

- Integrates securely and smoothly with the system.
- Records all financial transactions accurately.

Requirements Gathering:

1-Stakeholder Analysis:

oSystem:

- Integrates securely and smoothly with the system.
- Records all financial transactions accurately.

• User Stories:

- As a customer, I want to search for available rooms so that I can book one that fits my needs.
- As a customer, I want to view room details so that I can decide which room to book.
- As a customer, I want to pay online securely so that my booking is confirmed immediately.
- As an admin, I want to add and manage room types so that the hotel offerings stay up to date.
- As an admin, I want to view all customer bookings so that I can manage hotel occupancy.
- As a manager, I want to generate reports about reservations so that I can make informed business decisions.

Functional Requirements:

- User Management: Register, login, and logout using ASP.NET Identity, Role-based access.
- Room management: Add, edit, and delete room types, manage room availability.
- Booking management: Search, reservation cart, confirm booking with payment, booking history.
- Admin Dashboard: manage rooms and bookings, view customer details, generate booking reports.
- Notifications: Real-time success/failure messages, email confirmations.

Non-Functional Requirements:

- **Performance:** System responds within 3 seconds.
- **Security:** Encrypted data, secure Stripe payments, authentication & authorization.
- **Usability:** Intuitive, responsive UI with Bootstrap. Reliability & Availability: 99% uptime, atomic booking transactions.
- **Scalability:** Supports growth without redesign.

Use Case

Actors

1-Customer:

- End user who registers, logs in, searches for rooms, and makes reservations.
- Can also view, modify, or cancel bookings, and make online payments.

2-Admin:

- Responsible for managing hotel operations such as adding rooms, updating availability, and viewing reports.
- Can manage users, bookings, and system settings.

3-System:

- Automatically validates user data, processes payments, and updates booking status and room availability in real-time.

Use Case

Main Use Cases

1. Customer

- Register / Login: Customer creates an account or logs in to access the system.
- Search Rooms: Search for available rooms based on date, price, and room type.
- Make Booking: Select a room and confirm reservation.
- Make Payment: Complete payment securely through the system.
- View Booking History: Review past and current bookings.
- Cancel Booking: Cancel a confirmed booking before the stay date.
- Update Profile: Edit personal details such as contact info or password.

2. Admin

- Manage Rooms: Add, update, delete room details and price
- View All Bookings: Access a list all customer reservations.
- Manage Users: View or edit customer information.
- Generate Reports: Get insights bookings, payments, and room occupancy.
- Manage System Settings: Cont room availability and booking ru

Use Case

Main Use Cases

3. System:

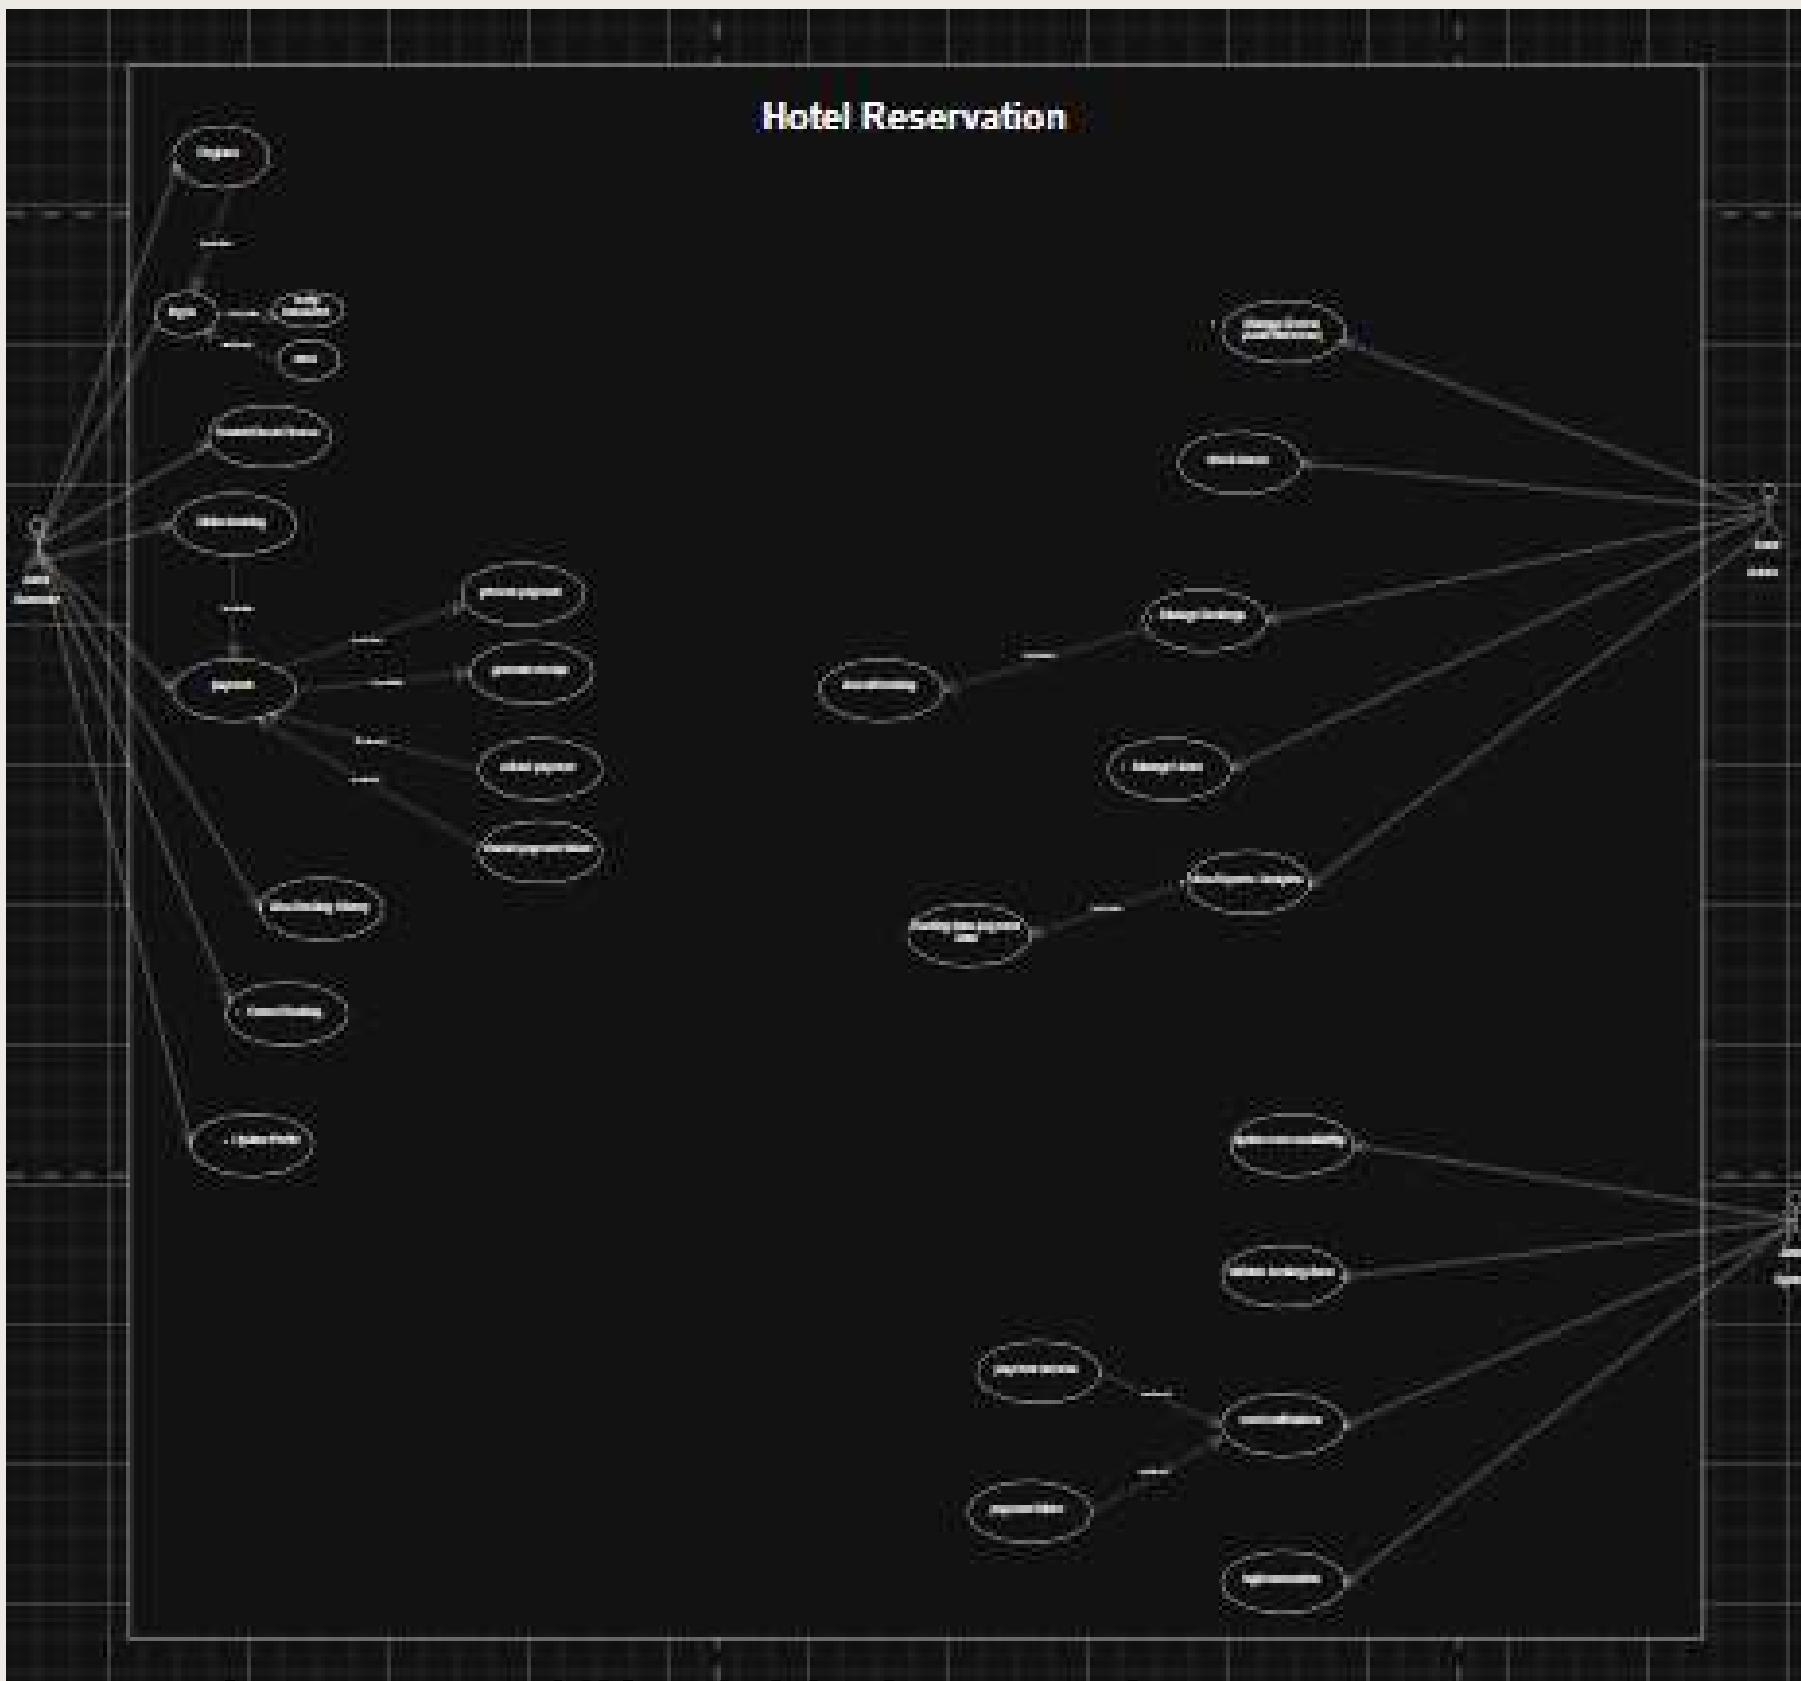

- Process Payment: Validate and process online transactions securely.
- Update Room Availability: Automatically adjust room status after bookings or cancellations.
- Send Notifications: Notify customers of booking confirmations, payments, or cancellations.
- Generate Invoice: Create digital receipts after successful payment.
- Validate Login / Registration: Ensure secure authentication and data validation.

Use Case

Summary

This use case diagram represents the complete workflow of a hotel reservation web application. Customers can search and book rooms, admins can manage operations, and the system handles automation like payments and room availability – ensuring a smooth and efficient hotel booking experience.

DFD

Data Flow Diagram (DFD) Description

The Bookify Hotel Reservation System DFD (Level 0) illustrates the overall data flow between the system and its external entities. It shows how information moves between users, administrators, managers, and the payment gateway through a centralized web-based system responsible for handling hotel reservations, payments, and reports.

DFD

External Entities and Their Interactions

- **1. User**
- Inputs to the System:
 - Registration details to create a new account.
 - Search queries for available rooms.
 - Booking requests including selected room and stay dates.
 - Payment confirmations for completed reservations.
- Outputs from the System:
 - Confirmation of registration and booking.
 - Room list based on search criteria.
 - Previous reservations and booking reports.

DFD

External Entities and Their Interactions

- **2. Admin**
- Inputs to the System:
- Room and type details for room management.
- User permissions and management data.
- Outputs from the System:
- Updated room management data.
- Booked rooms and reservation details for monitoring and decision-making.

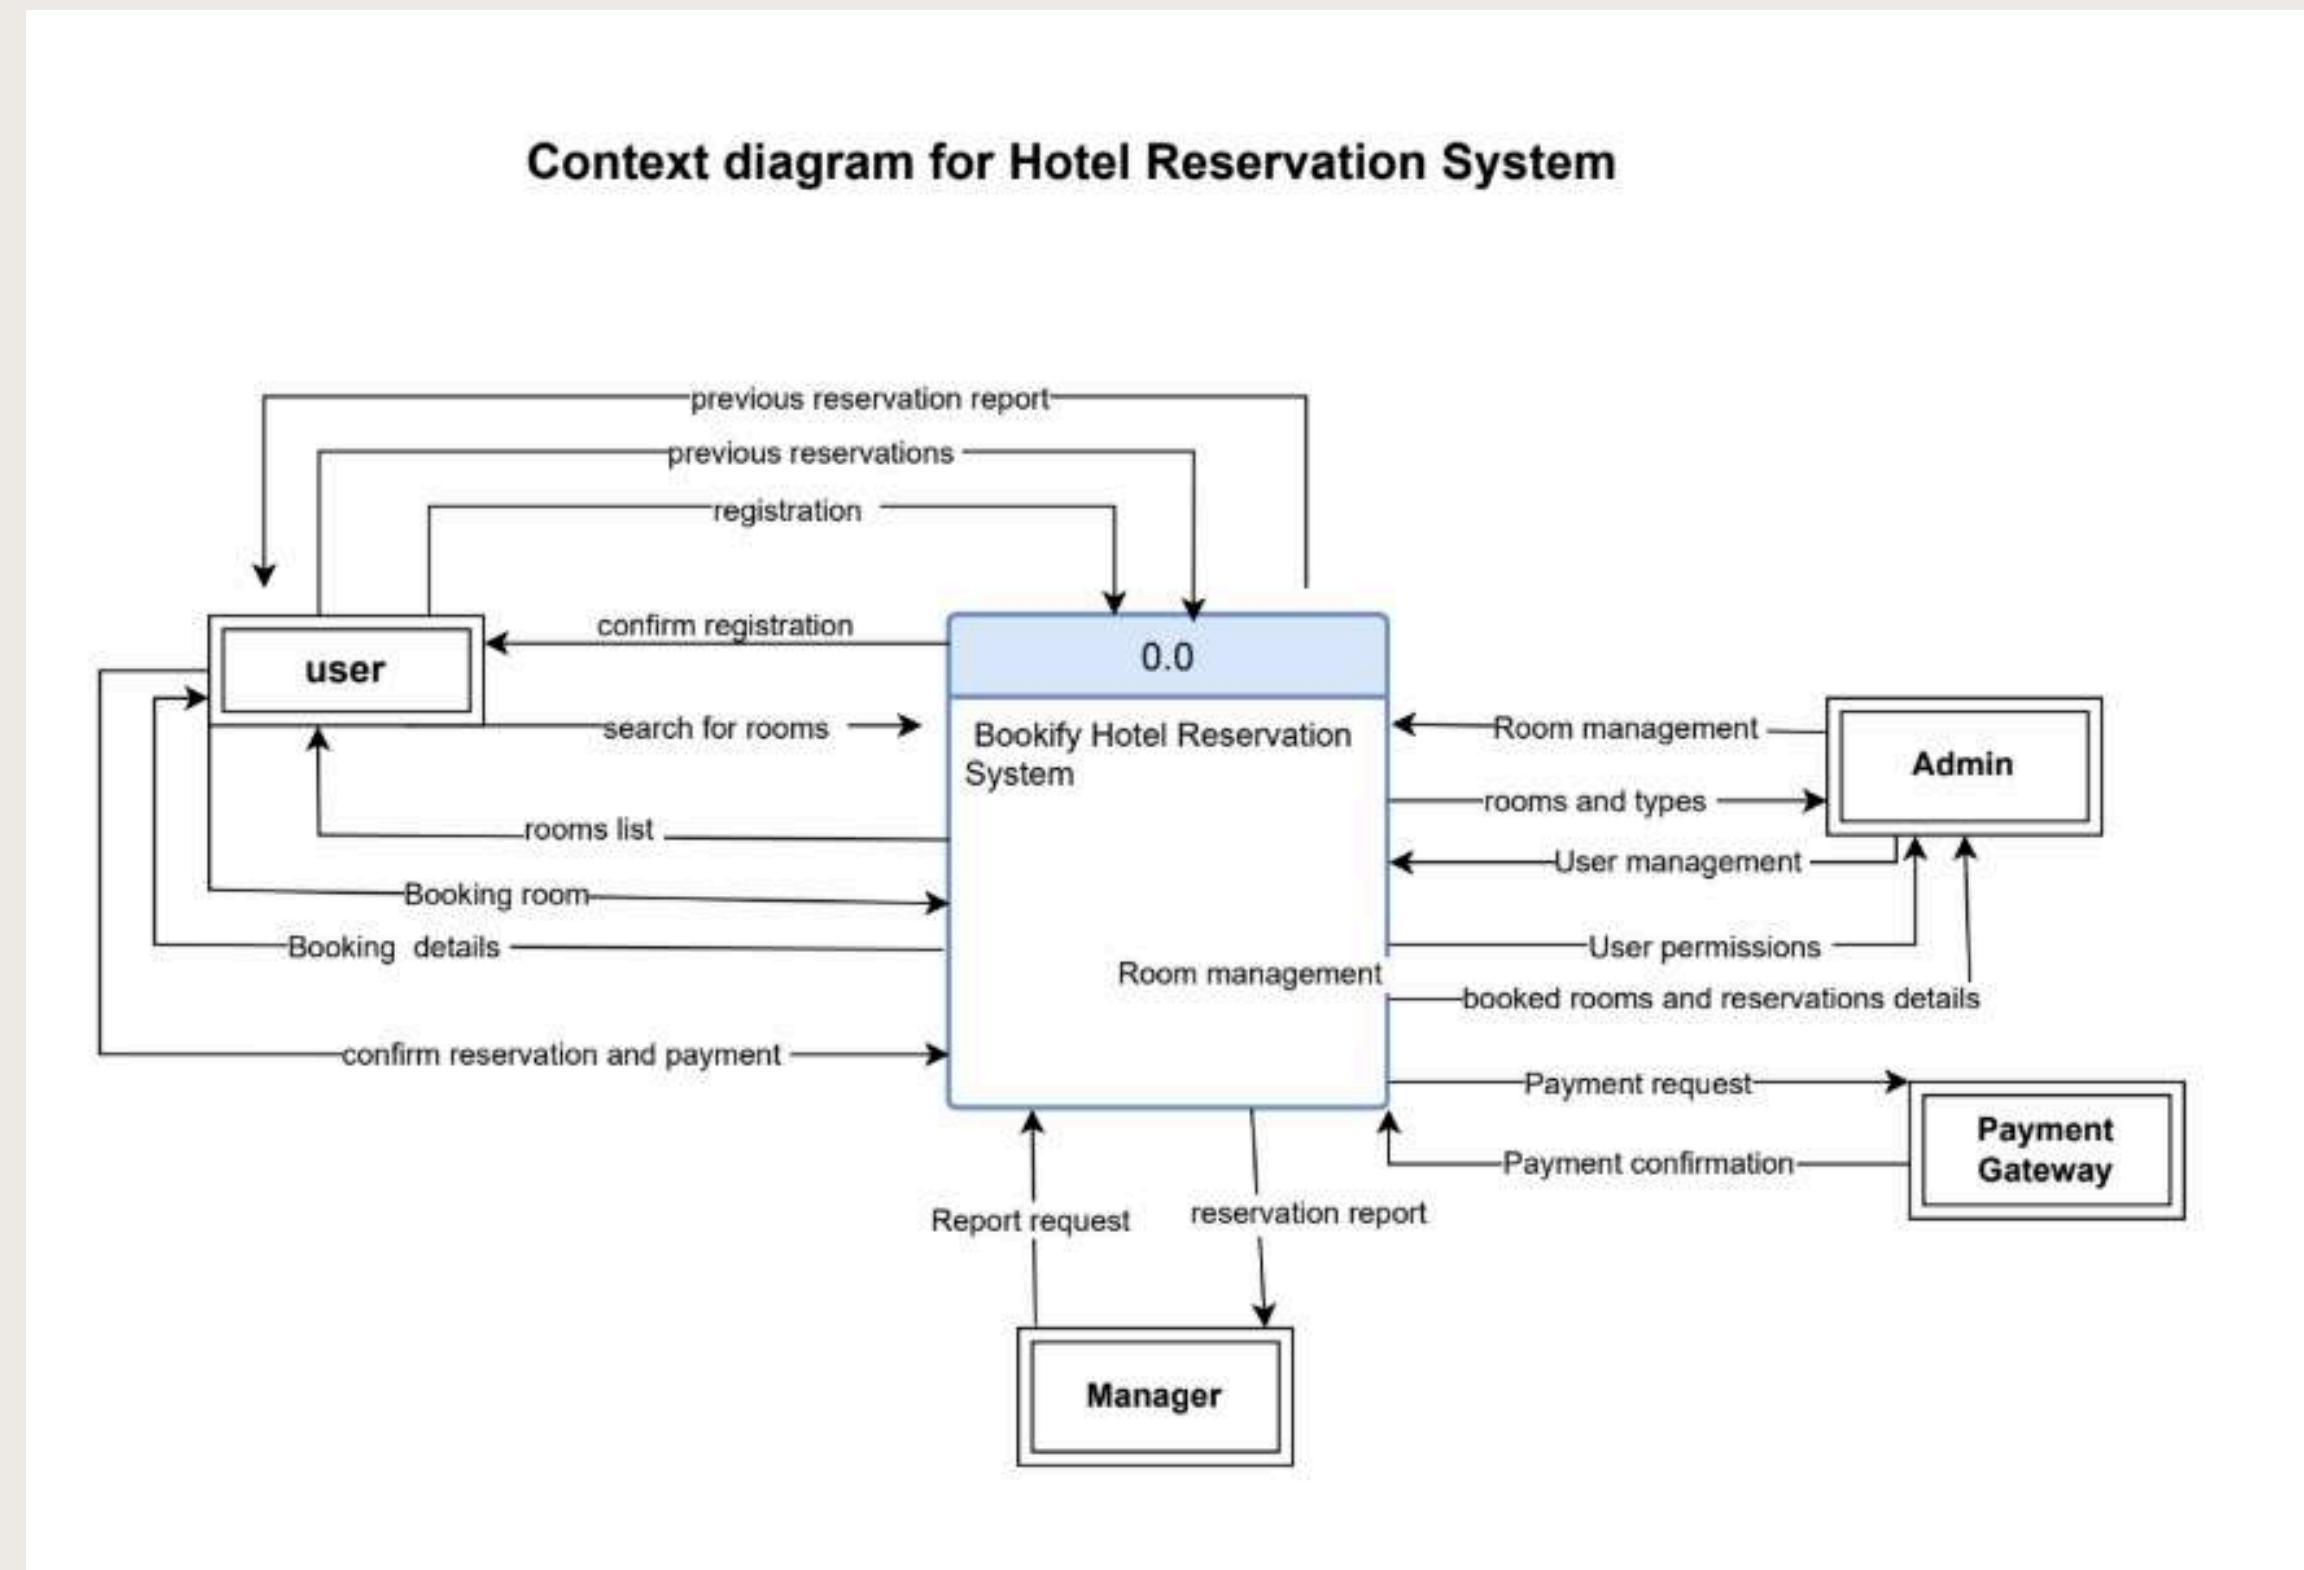

DFD

External Entities and Their Interactions

3. Manager

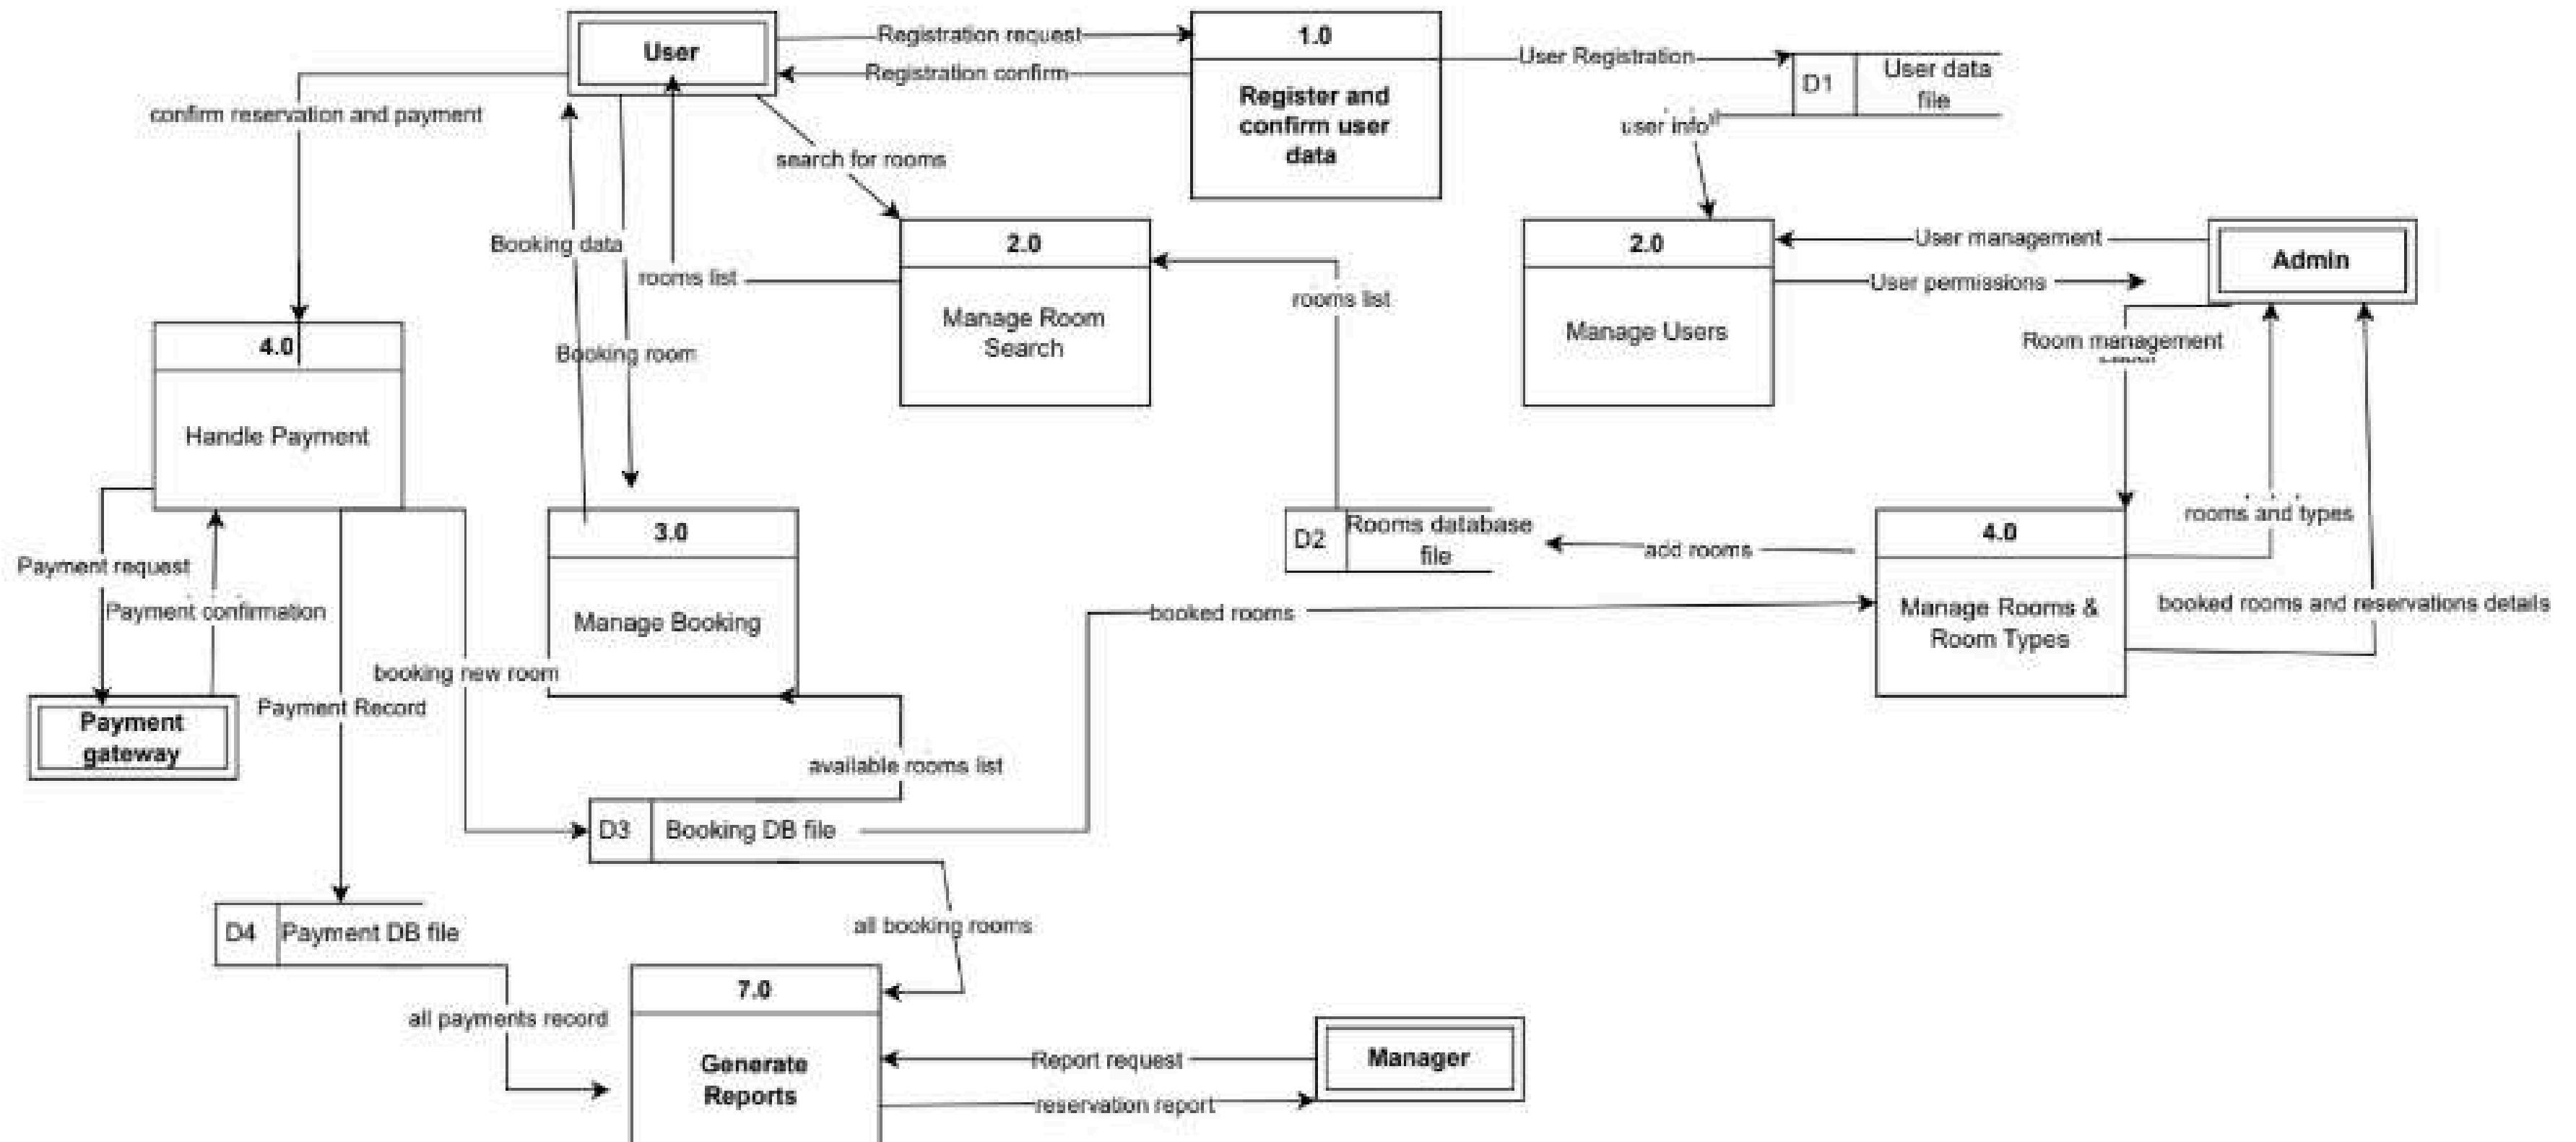

- Inputs to the System:
- Report requests to review system or booking performance.
- Outputs from the System:
- Reservation reports and summaries to assist in management decisions.

Level 0 Bookify Hotel Reservation System

ERD

Overall ERD Description

This ERD outlines the database structure for a Hotel Reservation and Management System. The system is designed to handle user accounts, room inventory, booking processes, payment transactions, and role-based permissions for staff and customers.

The diagram shows a classic relational database model for a hotel, connecting users to their reservations, payments, and assigned roles.

ERD

Entity Descriptions

1. User Management:

- user: This is the core table for storing all user accounts (both customers and staff).
- Key Attributes: user_id, Email, Phone_Number, Password_Hash (crucial for secure login), first_name, Name.
- Purpose: Authenticates users and stores their personal contact information.

2. Room & Inventory Management:

- Room: Manages the physical rooms in the hotel.
- Key Attributes: Room_id, Floor, Room_Num (Room Number), Status (e.g., Available, Occupied, Cleaning).
- Relationships: Linked to a Room-Type via Room_Type_id.
- Room-Type: Defines the categories of rooms available (e.g., Standard, Deluxe, Suite).
- Key Attributes: name, Price_Per_Day. This allows for flexible pricing without hard-coding it into each room.

3. Booking & Reservation Core:

- Reservation (likely represented by "Resservation card" and "Booking_id"): This is the central entity that records a booking.
- Key Attributes: Booking_id, CheckIn_date, CheckOut_date, card_id (possibly a folio number).
- Relationships: Connects a user to a Room for a specific date range.

ERD

Entity Descriptions

4. Financial Transactions:

- transaction_Reference: Handles all payment activities.
- Key Attributes: pay_id, payment_Date, Amount, Payment_Methode (e.g., Credit Card, Cash).
- Purpose: Creates a record for every payment made, which can be linked to a reservation or a checkout bill.

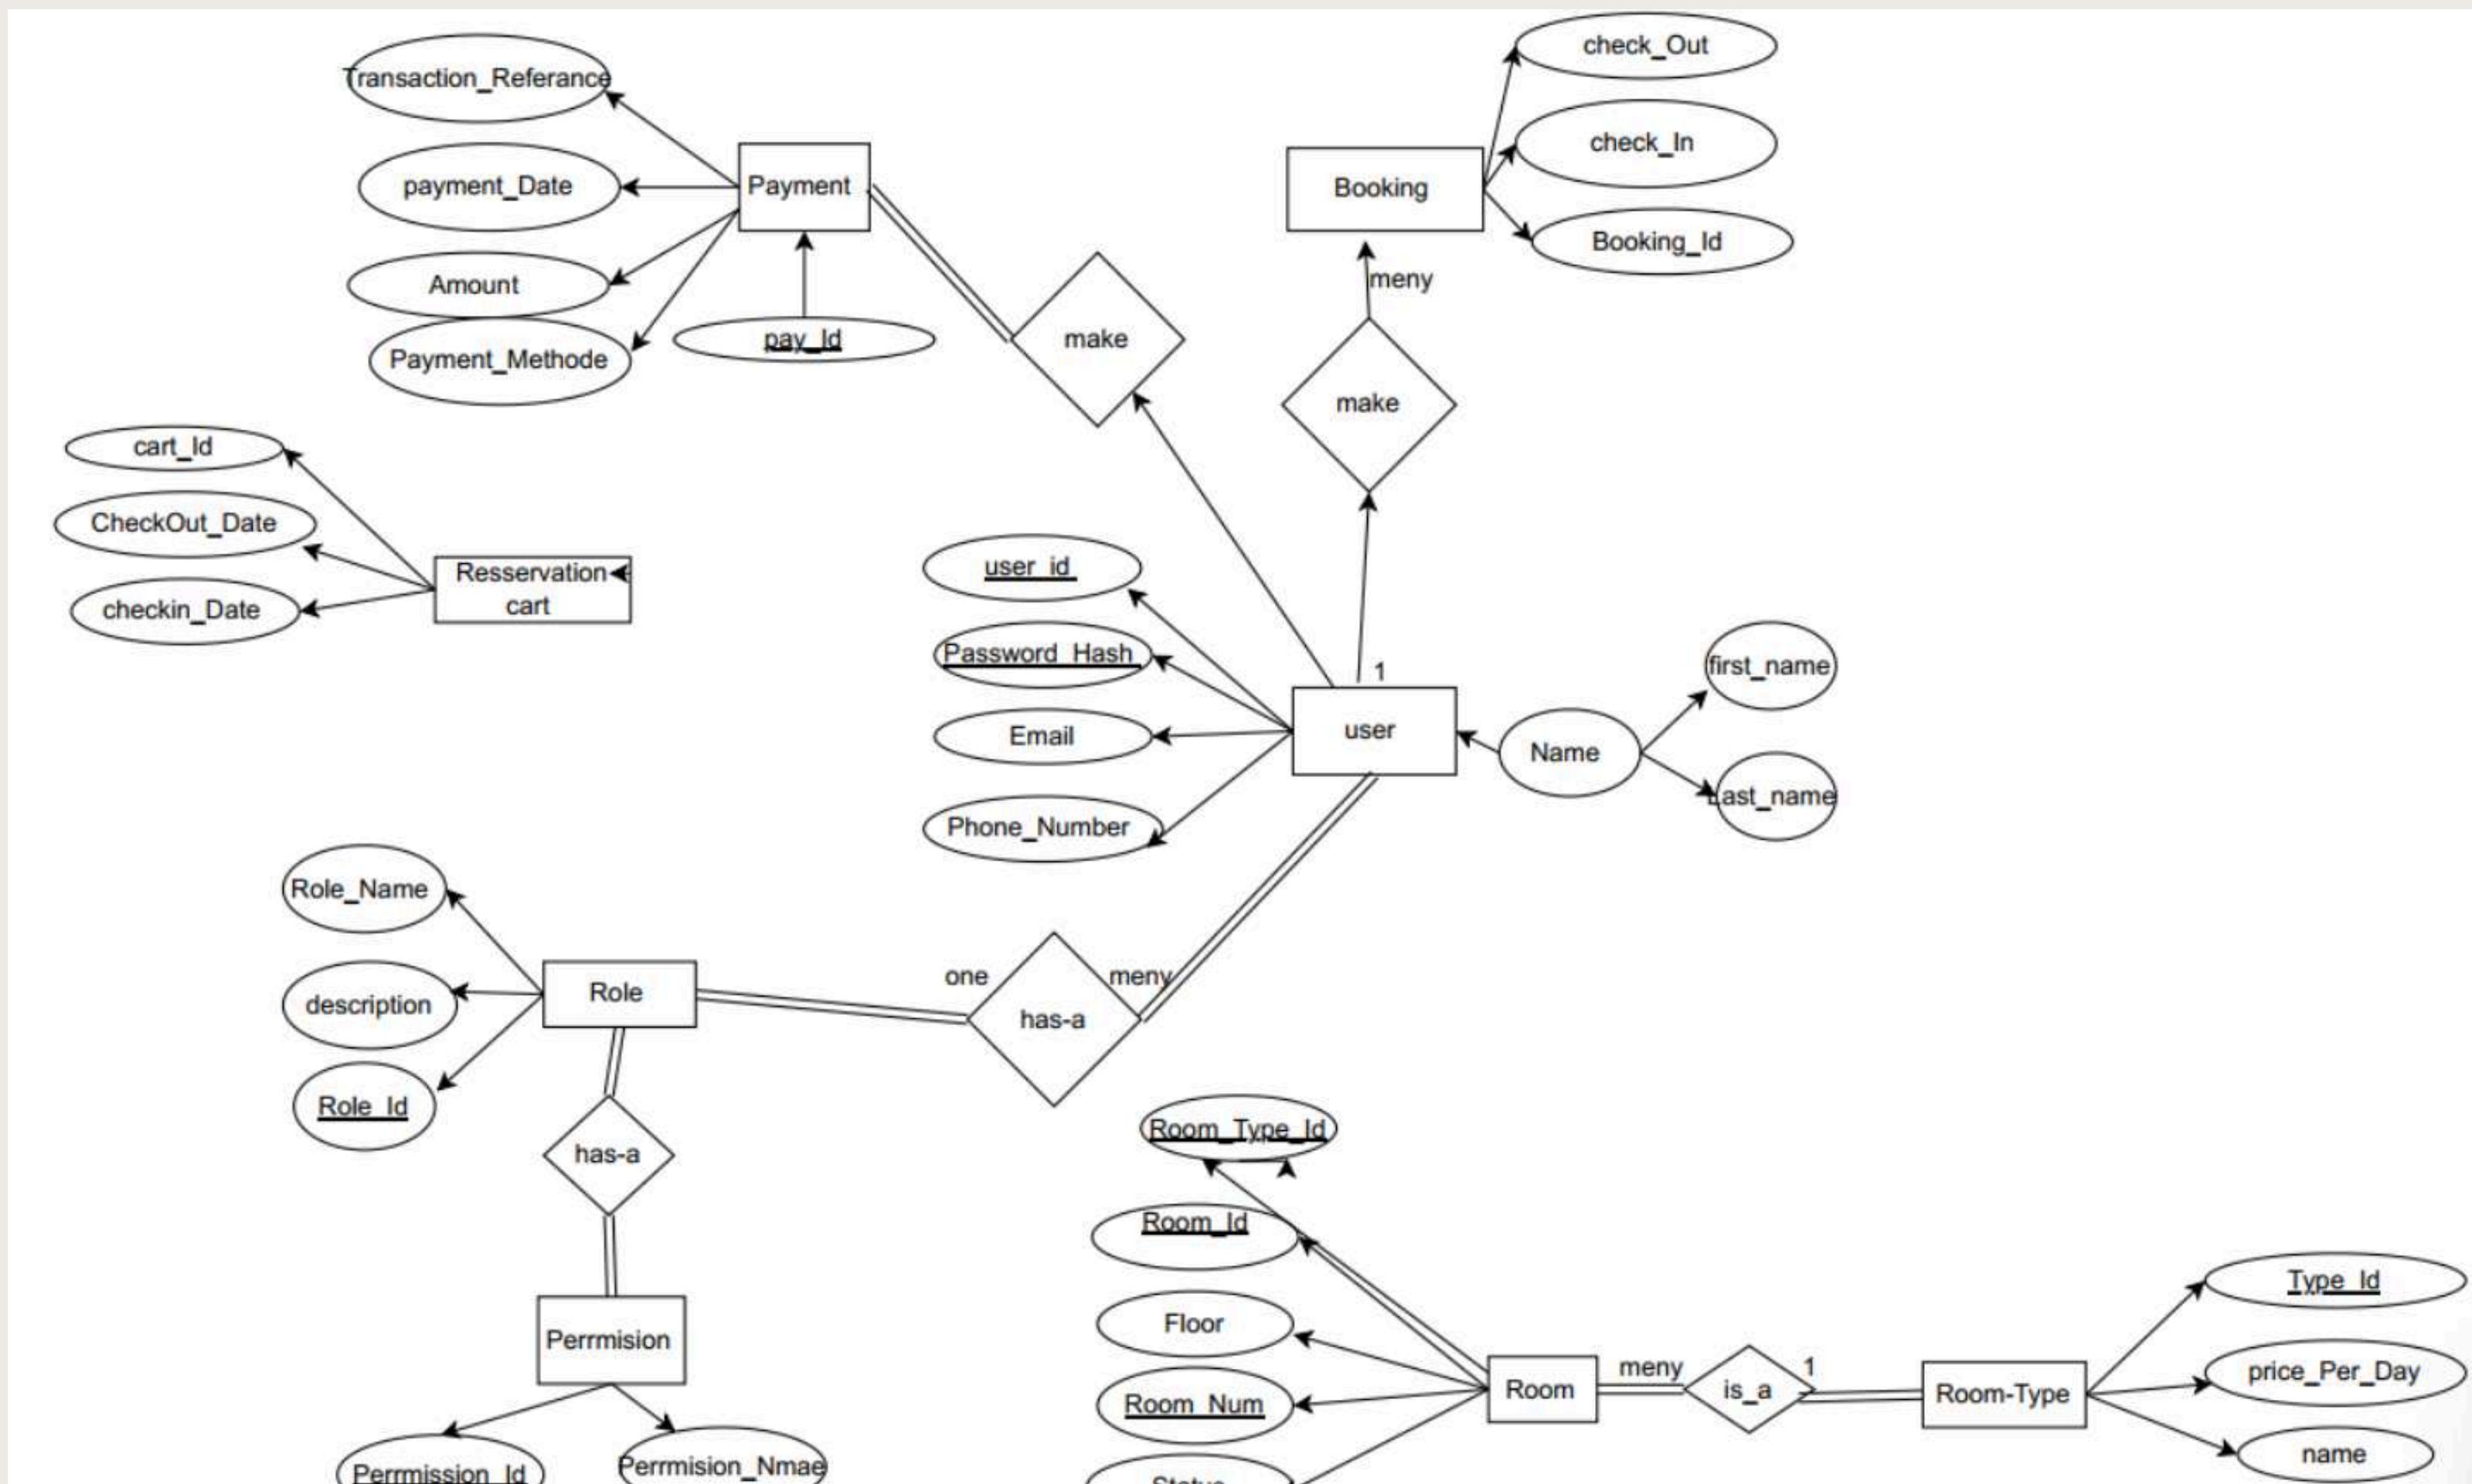

5. Checkout Process:

- check_Out: Manages the final settlement when a guest leaves.
- Key Attributes: checking_id, money (likely the final amount due).
- Relationships: Linked to a Booking_id to finalize the reservation and process any final payments.

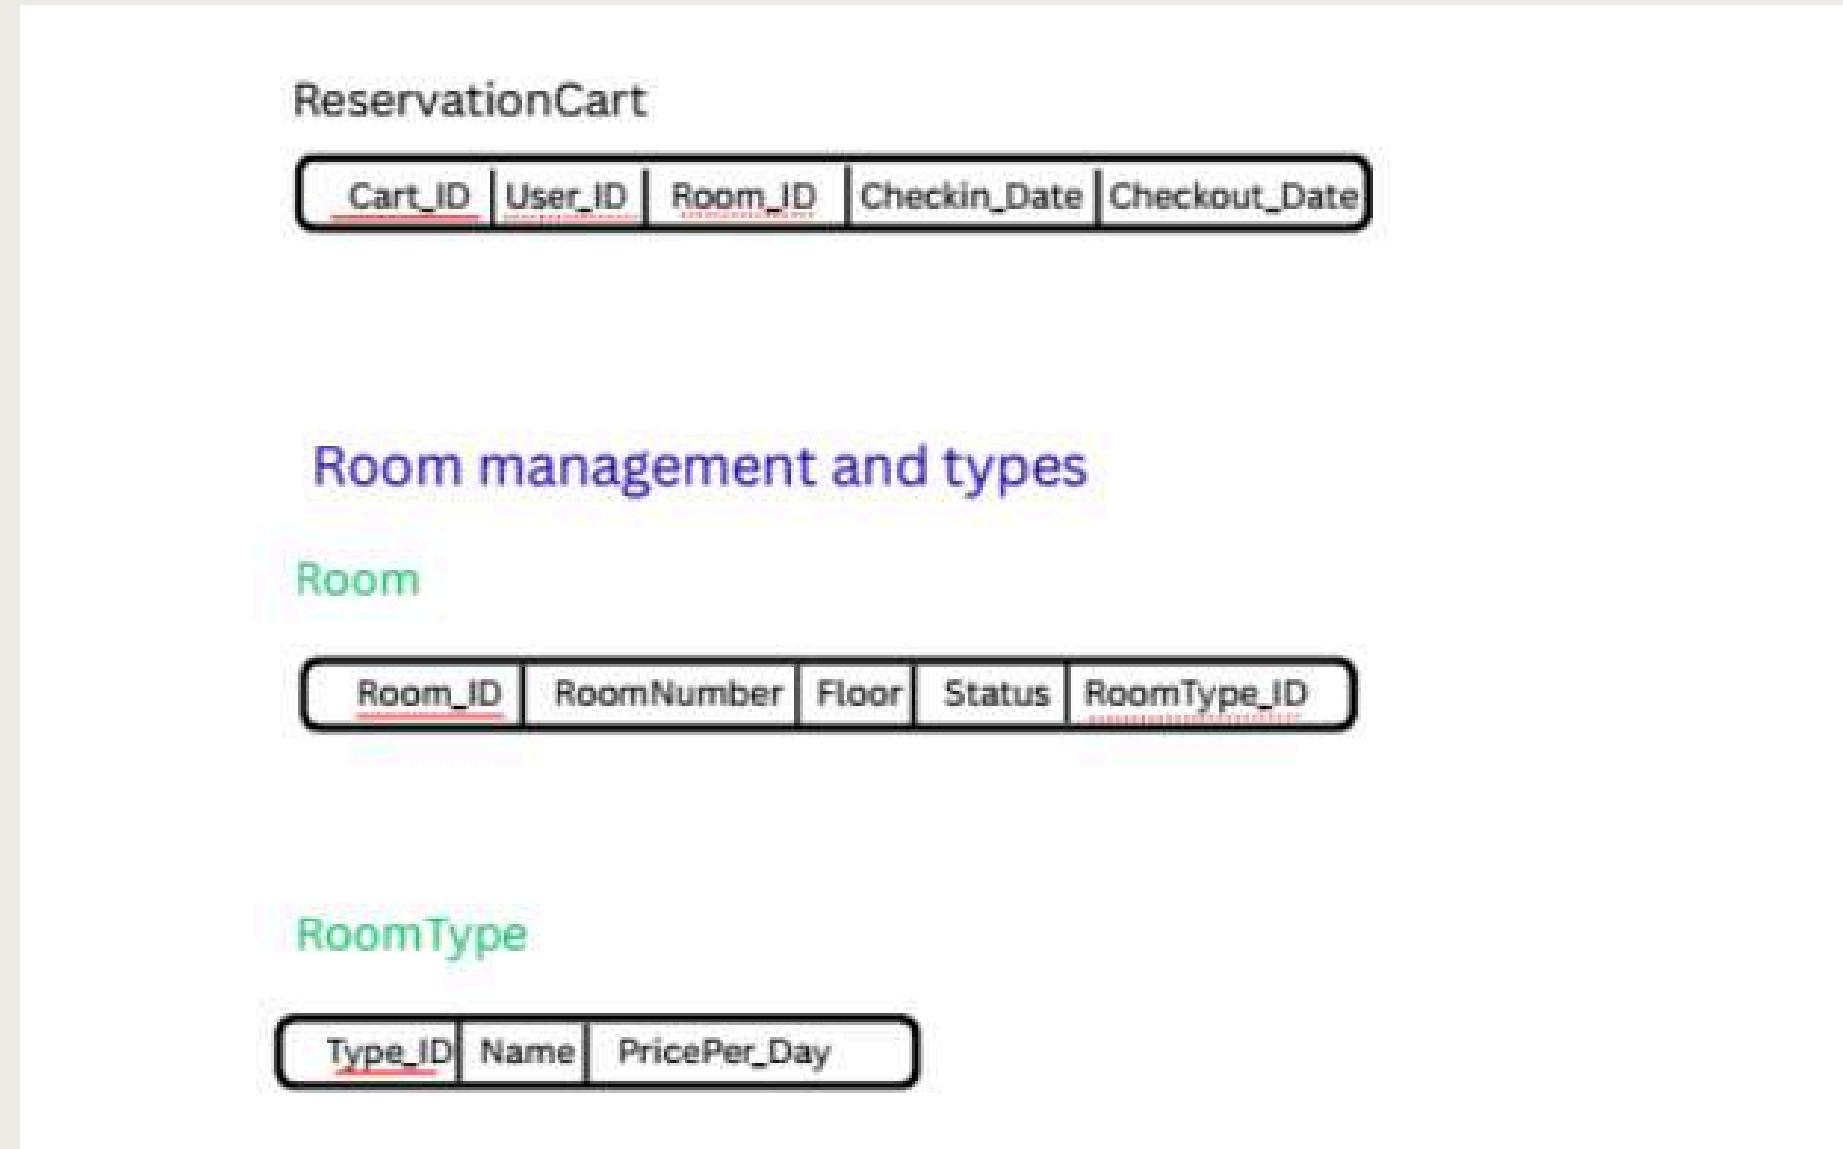

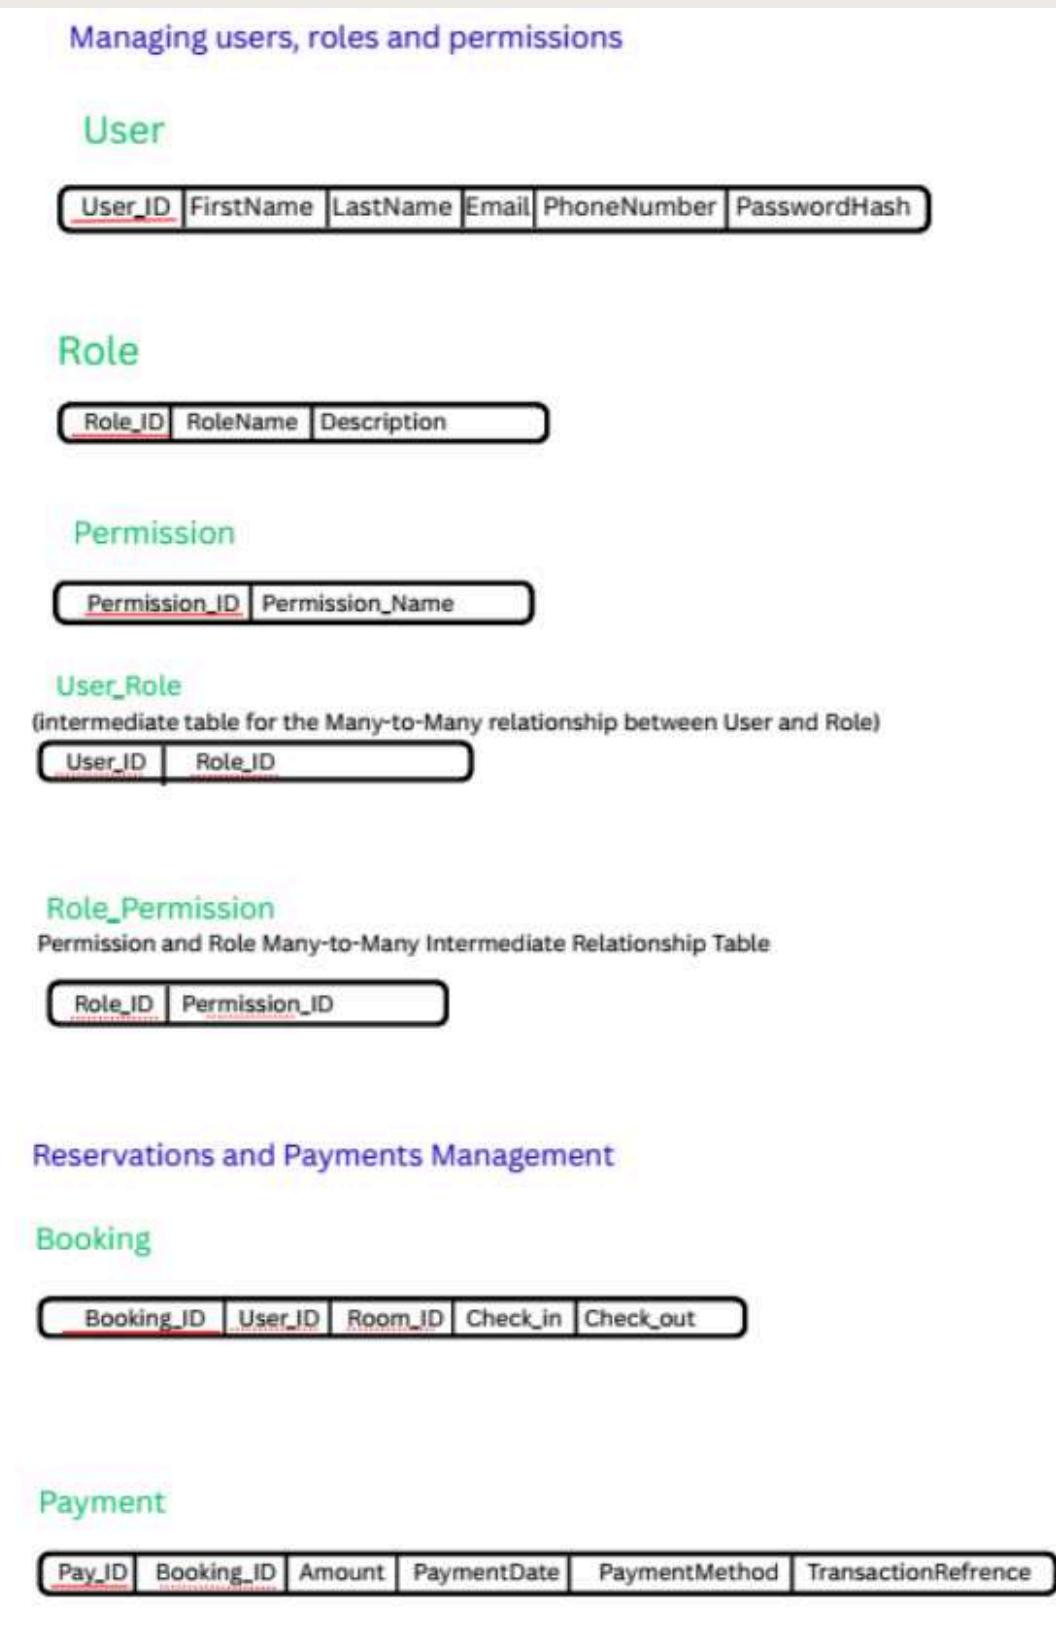

6. Access Control & Security:

- Role: Defines different levels of system access (e.g., "Admin", "Receptionist", "Customer").
- Key Attributes: Role_id, role_name, description.
- Permission: Defines specific actions that can be performed within the system (e.g., "create_booking", "view_reports").
- Key Attributes: Permission_id, permission_Nmap (likely the name of the permission).
- The Relationship: The has-a relationship between Role and Permission is a classic many-to-many relationship. This means one role (e.g., "Admin") can have many permissions, and one permission (e.g., "edit_room") can be assigned to many roles. This is typically implemented with a junction table.

ERD(image)

Schema

Schema Relationship

User (User ID) → Booking (User ID)

User (User ID) → User Role (User ID)

User (User ID) → ReservationCart (User ID)

Role (Role ID) → User Role (Role ID)

Role (Role ID) → Role Permission (Role ID)

Permission (Permission ID) → Role Permission (Permission ID)

Booking (Booking ID) → Payment (Booking ID)

Room (Room ID) → Booking (Room ID)

Room (Room ID) → ReservationCart (Room ID)

Room Type (Type ID) → Room (RoomType ID)

UI/UX

Overall UI/UX Description

- Bookify presents a modern, clean, and user-centric hotel booking experience. The design focuses on visual appeal, intuitive navigation, and a seamless booking flow from discovery to confirmation.

UI/UX

Design System & Visual Identity

- Color Scheme: Clean and minimalist (likely whites, neutrals, with accent colors for buttons and highlights)
- Typography: Clear, readable fonts with hierarchical sizing for headings, subheadings, and body text
- Imagery: High-quality room photos and elegant visuals to showcase luxury and comfort
- Layout: Card-based design for rooms, consistent spacing, and a balanced visual structure

UI/UX

Key User Flows & Screens

1. Homepage / Landing Page

- Hero Section: "Find Your Perfect Stay" with a search widget (room type, guests, dates)
- Value Proposition: Brief welcome message with a "Book Now" call-to-action
- Featured Rooms: Grid of room cards with images, descriptions, prices, and "View Details" buttons

UI/UX

2. About Us Page

- Brand storytelling: Mission, Values, and Journey
- Focus on trust-building and emotional connection with users

3. Rooms Listing Page

- Display of all room types in a clean grid
- Each room includes:
- Image
- Name
- Brief description
- Price per night
- "View Details" & "Book Now" buttons

UI/UX

4. Booking / Checkout Flow

- Step 1: Guest Details
- Form for personal information (pre-filled if logged in)
- Special requests text area
- Step 2: Payment Information
- Payment method selection (Credit Card / PayPal)
- Card details form (secure input fields)
- Step 3: Booking Summary
- Clear breakdown of costs
- Final review before confirmation
- "Confirm Booking" button

5. Shopping Cart

- Displays selected rooms with dates and guest counts
- Edit/remove functionality
- Order summary with subtotal, taxes, and total
- "Confirm Booking" action

UI/UX

6. Authentication Pages

- Login: Simple form with email/password, remember me, and forgot password options
- Sign Up: Registration form with name, email, and password fields

7. Contact Page

- Contact form with name, email, and message fields
- Location details and contact information

UI/UX

UX Strengths & Notable Features

1. Progressive Disclosure:

- Simple search on homepage → detailed room views → booking form
- Step-by-step checkout process reduces cognitive load

2. Visual Hierarchy:

- Clear pricing information
- Prominent call-to-action buttons
- Consistent card design for room listings

3. User Convenience:

- Guest details pre-filling capability
- Multiple payment options
- Special requests field for personalization

4. Trust Elements:

- Detailed booking summary with cost breakdown
- Professional and polished visual design
- Comprehensive contact information

5. Responsive Design:

- Layout adapts well to different screen sizes (inferred from structure)

UI/UX

- **User Journey Map!!**
 1. Discover: Land on homepage → browse featured rooms
 2. Explore: View room details → compare options
 3. Select: Choose room → add to cart or book directly
 4. Book: Enter details → payment → confirmation
 5. Manage: Access bookings through user account

UI/UX design

The screenshot shows the homepage of the Bookify website. At the top, there's a search bar with placeholder text "Find Your Perfect Stay" and dropdown menus for "Select room type", "Number of guests", and date selection ("Check-in date" and "Check-out date"). Below the search bar is a large "Search" button. The background features a collage of images related to travel and accommodation. A prominent "Welcome to Bookify" section includes a brief introduction and a "Book Now" button. The main content area is titled "Our Featured Rooms" and displays six room types with their respective images, names, descriptions, and price per night (\$800-\$2000). Each room listing has a "View Details" button. The footer contains links for "About Us", "Contact", "FAQ", "Privacy Policy", "Terms & Conditions", and "Help". There are also social media icons for Facebook, Instagram, and YouTube.

Welcome to Bookify

At Bookify, we believe that every journey deserves a memorable stay. We are dedicated to providing an unparalleled experience, blending luxurious comfort with exceptional service to create your perfect home away from home.

Our Mission

Our mission is to redefine hospitality by offering a sanctuary of peace and luxury. We strive to create unforgettable memories for every guest through personalized service, sustainable practices, and a commitment to sustainable practices. We aim to be the premier choice for travelers seeking comfort, elegance, and genuine warmth.

Our Values

Excellence in Service
We are committed to delivering top-notch service, anticipating your needs, and exceeding expectations at every turn. Our dedicated team is the heart of our hospitality.

Sustainable Practices
We believe in responsible tourism and are dedicated to conserving our environment. Through a sustainable, eco-friendly, and preserving our planet for future generations.

Uncompromising Quality
From the finest linens to gourmet dining, we maintain uncompromising standards of quality and service.

Genuine Hospitality
Our warmth and welcoming nature are at the core of what we do. We strive to make every guest feel valued, respected, and truly at home.

Our Journey So Far

Bookify began with a simple dream: to create a haven where travelers could escape the ordinary and experience extraordinary comfort. From our humble beginnings as a boutique hotel, we have grown into a beloved destination, all while staying true to our foundational values of quality and care. Every hotel, every feature, every smile helps tell a part of our continuing story.
